

- **What is markdown**

- It's just text with ## for headings, and - or 1. for bullets, that is easier to read in markdown viewers:

Heading 1

Heading 2

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do eiusmod labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud ex laboris.

Key Benefits

- Provides neutral content for design mockups and prototypes

- Allows focus on visual layout without distraction from meaningful text

- Has been the industry standard since the 1500s

Sample Data Table

Category	Value	Status
Alpha	42	Active
Beta	67	Pending
Gamma	91	Complete

Additional Considerations

1. Easy to generate in various lengths

2. Recognized universally by designers and developers

3. Maintains consistent character distribution for realistic text flow

Heading 1

Heading 2

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do eiusmod labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud ex laboris.

Key Benefits

- Provides neutral content for design mockups and prototypes

- Allows focus on visual layout without distraction from meaningful text

- Has been the industry standard since the 1500s

Sample Data Table

Category	Value	Status
Alpha	42	Active
Beta	67	Pending
Gamma	91	Complete

Additional Considerations

1. Easy to generate in various lengths

2. Recognized universally by designers and developers

3. Maintains consistent character distribution for realistic text flow

- Named file.md instead of file.txt
- Does not support coloured text
- AI apps understand markdown headings and bullets. It truly helps with complex prompts
- But mostly md files are very small, and very easy to add to an AI chat, with no conversion or time losses
- Can be viewed by any app (it's text) but we like Obsidian for the copy/paste benefits

- **First job is to open a FOLDER and view files - as you are used to**

- This is the **only** confusing part: Bottom left "Obsidian vault", "Manage Vaults", 2nd option is "Open folder as vault".

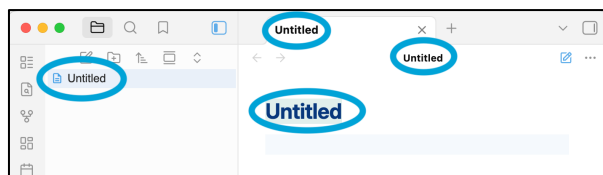

- Find or create a folder on your desktop or somewhere easy

- **Create a new file or sub-folder**

- Icons top left are for new file (.md), and new folder

- New file name on left will be same in several places, no matter where you change it

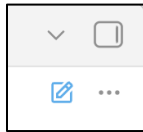

- In the right you can now type with #, ##, ### for headings, - for bullets, 1. for numbered lists

- **A basic setting to limit confusion**

- Settings, Appearance, turn off "Show inline title"

- **Mostly it's good for copy paste storing of chat results in universal md format**
 - Please use Ctrl-C for copy, Ctrl-V for paste (Command-C on Mac)
 - **Obsidian → chatGPT/Claude as md**
 - Obsidian mark, copy, switch to chatGPT, paste
 - **chatGPT/Claude pretty output → obsidian as md**
 - chatGPT use copy button, switch to Obsidian, paste
 - **Word/ppt pretty → Obsidian as md**
 - Word mark, copy, switch to Obsidian, paste
 - Will lose # headings and make into bold text instead
 - **Obsidian pretty → Word/ppt pretty**
 - Must be in Obsidian **reading** view (top right icon is a pen) else it will not copy pretty view

- **Must** mark with mouse, copy, switch to Word, paste
